PROFESSIONAL SUMMARY

Fourth-year Software Engineering student (GPA: 3.15/4.0) specializing in backend development with Java (Servlet/JSP, Spring Boot) and MySQL. Hands-on experience designing RESTful APIs, modeling relational databases, and building full-stack web applications through academic and personal projects. Seeking a Backend Developer internship to apply my skills to real-world systems and grow in API design and system architecture.

WORK EXPERIENCE

Amazon Web Services Viet Nam Company Limited 03/05/2026 - 05/08/2026

Internship Position: Workforce Bootcamp - First Cloud AI Journey

- Completed a 12-week AWS Cloud internship program, learning cloud fundamentals through guided hands-on labs with AWS services (EC2, S3, Lambda, RDS, DynamoDB, CloudFront, CloudWatch, IAM, etc.).
- Built the “Automated Goods Quality Monitoring” internship project on a serverless architecture, combining AWS Lambda, S3, SQS, Amazon Rekognition, and DynamoDB.
- Wrote 3 technical blog posts about AWS for the AWS Study Group FCJ community.

Internship Report: https://chickenptt.github.io/Intership_Report-AWS-FCAJ/

Highlands Coffee 04/2024 - 05/2025

Barista

- Prepared drinks following standard procedures, ensuring quality and service speed.
- Worked in a team of 3–4 to handle over 200 customers per peak hour, maintaining efficiency under pressure.

PROJECT

Programming Learning Website with AI Support 06/09/2026 - In progress

Backend Developer

A website platform that helps learners practice programming through coding exercises, flashcards, and quizzes, with automated AI feedback. Integrates Judge0 for online code execution and Google Gemini (with Groq fallback) for code error analysis and auto-generated problems from templates.

Tech Stack:

- Backend: Java 26, Spring Boot 4.1, Spring Security (JWT + Refresh Token), Spring Data JPA, Spring AOP
- Frontend: React 18, TypeScript, Vite, Tailwind CSS, Monaco Editor
- Database: PostgreSQL
- External services: Google Gemini API, Groq API (fallback), Judge0 sandbox (2 languages: Java, Python)

Key Achievements:

- Built a complete full-stack architecture from scratch, including REST API, SPA frontend, and database design
- Integrated multi-layer AI (Gemini + Groq fallback) to ensure reliability when AI services are unavailable
- Implemented automated audit logging using Spring AOP to track all admin operations
- Supported real-time code execution and grading for 2 programming languages via Judge0 sandbox
- Built a complete Role-Based Access Control system with 2 roles (Student/Admin) and granular endpoint-level authorization
- Developed an admin dashboard with weekly submission statistics, success rates, and user management features

Sugar Petals - Online Cake & Tea Ordering Platform 20/06/2026 - 27/07/2026

Backend Developer

An e-commerce platform that lets customers browse the menu, add products to the cart, apply promo codes and combo deals, and order cakes and teas online for home delivery. The system integrates automated birthday emails and password reset functionality, along with a comprehensive admin dashboard for order and revenue management.

Tech Stack:

- Backend: Java 17, Spring Boot 4.1, Spring Security (Form Login + Role-Based Access Control), Spring Data JPA, Spring AOP, Spring Mail (SMTP), Spring Scheduled Tasks
- Frontend: HTML5, CSS3, Vanilla JavaScript, Thymeleaf (server-side templating)
- Database: MySQL
- External services: Gmail SMTP (Spring Mail) for automated emails

Key Achievements:

- Built a multi-layer promotional system: category-based campaigns, combo deals, promo codes, and automatic 10% birthday discounts
- Developed REST API endpoints for user operations: registration, login, cart management, order placement, and order tracking
- Designed relational database schema with entities: User, Product, Order, OrderItem, Category, Campaign, Combo, Promotion
- Designed an order management system with multiple status transitions (Pending → Processing → Preparing → Delivered) and payment status tracking

EDUCATION

Van Lang University 2023 - 2027

Information Technology

Fourth-year student (GPA: 3.15/4.0)

CERTIFICATES AND AWARDS

English VSTEP - B2	01/12/2025
Data Structures & Backend with Java	09/03/2026
Top 10% Academic Achievement Scholarship	2024 - 2025

SKILLS

AI tools:	Use ChatGPT, Gemini, Claude, and DeepSeek to speed up research and debugging; always review and verify generated code before using it.
Technical Skills:	**Programming Languages:** Java (primary), Python **Backend:** Java (Spring Boot, REST API, JPA/Hibernate) **Database:** MySQL, PostgreSQL (basic: schema design, CRUD, JOIN queries) **Frontend (basic):** HTML, CSS, JavaScript **Tools:** Git/GitHub, Postman, Maven
